

We recommend the right platform, not our platform.

D Data Solutions Limited is a Canadian boutique data and AI advisory for public sector organizations and enterprises. We carry no reseller margins and no partner quotas: we assess the estate, put a recommendation in writing with costs and trade-offs on the record, and build what we recommend with a senior-only team.

CORE COMPETENCIES

Data & AI Strategy	Roadmaps tied to business cases; operating models, funding cases, and sequencing that stands up to board and Treasury scrutiny.
Platform Modernization	Independent platform assessments, migration plans, and coexistence architectures across Microsoft Fabric, Databricks, Snowflake, AWS, and GCP.
Data Engineering	Lakehouse and warehouse builds, medallion pipelines, batch and streaming ingestion. Engineered for handover, not dependency.
Analytics & BI	Semantic models people trust, rationalized reporting estates, and governed self-serve analytics.
Data Science & ML	Use cases selected for value and feasibility, models shipped to production, and the discipline to keep them there.
Governance & Trust	Cataloging, lineage, access control, and data quality designed into the platform from the first pipeline, not bolted on for the audit.

ENGAGEMENT MODELS

Platform Assessment • Fixed fee • 4–6 weeks

Estate assessment, options modeled across platforms, written recommendation with costs, risks, and sequence. Defined scope, timeline, and deliverables; findings are retained by the client regardless of what follows.

Advisory Retainer • Monthly

A senior advisor on call for architecture reviews, vendor negotiations, and the decisions in between.

Delivery Engagement • Scoped by outcome

A small senior team that builds what the assessment recommends: pipelines, models, governance, BI. Documented as built, handed over on purpose.

DIFFERENTIATORS

- **Platform-independent.** No reseller margins, no partner quotas. The recommendation is the product.
- **Senior-only staffing.** The people named in the proposal are the people on the engagement.
- **Data residency by design.** Estates architected to keep data in Canadian regions, with every workload's location documented.
- **Accessible deliverables.** Reports, dashboards, and applications designed to meet WCAG accessibility standards.
- **Procurement-friendly shape.** Fixed-fee, fixed-timeline assessment with defined deliverables that maps cleanly to evaluation criteria.

COMPANY DATA

D Data Solutions Limited

Federally incorporated, Corporations Canada, December 2025
